Fortunately, Hong Kong *does* publish the exact spatial trajectories of its buses, but they are housed in a different database. Here are the best ways to get the actual polyline geometries.

1. The Official Source: HK CSDI Portal

Hong Kong's **Common Spatial Data Infrastructure (CSDI)** portal contains the true spatial line geometries maintained by the Transport Department.

- **Where to find it:** Head over to the official **CSDI Portal** (portal.csdi.gov.hk).
- **Dataset ID to look for:** [td_rcd_1638844988873_41214](#)
- **Dataset Name:** **Bus Route (CSDI Portal)**
- **Why it works:** Unlike the basic open data portal, the CSDI platform is designed specifically for GIS use. This layer features the actual spatial vectors (**LineStrings**) tracing the physical paths of franchised buses.

2. The Quickest Download: Esri China (Hong Kong) Open Data

If navigating the official government CSDI portal interface or API queries feels a bit tedious, Esri China cleans, mirrors, and hosts this exact Transport Department dataset on their public ArcGIS platform.

- **Where to find it:** Search for "Bus Route in Hong Kong" on opendata.esrichina.hk.
- **Formats available:** You can directly export the trajectories into **GeoJSON**, **Shapefile (SHP)**, or **KML** with a single click.
- **Data Quality:** Because it mirrors the CSDI data, it accurately traces the physical road centerlines that the buses utilize.

3. The Developer Alternative: OpenStreetMap (OSM) via Overpass API

If you prefer highly detailed, community-vetted data that handles complex lane alignments seamlessly, the Hong Kong OSM community meticulously maps bus trajectories using relation tags.

You can extract these exact polylines instantly using **Overpass Turbo** (overpass-turbo.eu). Running the following query will isolate and download the geographic bus tracks for the entire territory:

Code snippet

None

```
[out:json][timeout:25];  
// Fetch all bus route relations within the Hong Kong boundary box  
relation["route"]="bus"](22.15,113.83,22.57,114.44);  
out geom;
```

Source	Format	Accuracy Type	Best Used For
CSDI Portal	GeoJSON / API	Official Govt Data	Live application integration and official compliance.
Esri China HK	SHP / GeoJSON / KML	Official Govt Data	Quick, one-off desktop GIS analysis (QGIS / ArcGIS).
OpenStreetMap	XML / JSON via Overpass	Crowdsourced	Highly detailed road-matching and custom map rendering.
